                                                                                                                                                                                                                                                                                                                                                                                                                                           The invention relates to the composition of matter suitable for use in identifying chemical compounds that bind to voltage-dependent ion channel proteins. The composition comprises a screening protein that consists of an ion channel voltage sensor domain of the ion channel protein immobilised on a solid support. The invention is useful for identifying chemical compounds (drug candidate) that bind to voltage-dependent ion channel proteins. The drug candidate of the invention is utilised for treating a condition mediated by aberrant electrical activity that initiates uptake or release of neurotransmitters and contraction of muscles. The drug candidate of the invention is also utilised for treating epilepsy and arrhythmia. The present sequence is a voltage-dependent potassium (Kv) channel protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Screening drug candidates that target voltage dependent ion channel protein, involves contacting screening protein with chemical compound, which is drug candidate and determining whether chemical compound binds to screening protein.
                                                                                                                                                                                                                                                                                                                                                                                                                    Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Disclosure; SEQ ID NO 6; 61pp; English.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Mackinnon
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             (MACK/)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       01-MAR-2003; 2003US-00377139

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            밁
                                                    This invention describes a novel potassium channel protein (I) that is either human Kv4.1 or Kv4.2. Eukaryotic cells that express potassium channels containing (I) are used to identify and test: (i) compounds for treatment of neurodegenerative diseases (autism, epilepsy, ischemia, stroke; Alzheimer's, Parkinson's and Huntington's diseases) or cardiac arrhythmia, or those that improve learning capacity and memory; and (ii) activators of protein kinases. Host cells that express (I) can identify agents that do not interact significantly with channels and control I to (a quickly activated transient current), so lack the side effects of known anti-arrhythmic agents. They also eliminate, or reduce, the need for testing on organ cultures
                                                                                                                                                                                                                                                                                                                                                                                                                                           Claim 4;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Human; Kv4.1; potassium channel protein; Kv4.2; autism; epilepsy; neurodegenerative disease; ischemia; stroke; Alzheimer's disease; Parkinson's disease; Huntington's disease; cardiac arrhythmia; memory; learning capacity; protein kinase activator; anti-arrhythmic.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   New potassium channel subunit proteins, useful for identifying and testing potential pharmaceuticals, e.g. anti-arrhythmic or neurologicals.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     29-DEC-1999;

Claim New composition comprising two or more isolated polypeptides, preparing a medicament for treating pain in an animal. invention discloses a composition comprising two or more isolated rat 2003-268312/26. ANK; AAA80459. 1; Page; 1017pp; BAYER ĀG Á Befort English ζ, Costigan 3

useful

cor human polynucleotides or a polynucleotide which represents a fragment, correct derivative or allelic variation of the nucleic acid sequence. Also colaimed are a vector comprising the novel polynucleotide, a host cell comprising the vector, a method for identifying a nucleotide sequence cell comprising the vector, a method for identifying a nucleotide sequence which is differentially regulated in an animal subjected to pain and a cell cubic to perform the method, an array, a method for identifying an agent that increases or decreases the expression of the polynucleotide sequence that is differentially expressed in neuronal tissue of a first animal cell cubic expressed in an animal subjected to pain, a method for identifying a compound which regulates the expressed in an animal subjected to pain, a method for identifying a compound that regulates the activity of one or more of the polynucleotides, a method for producing a pharmaceutical composition, a method for identifying a compound useful in treating pain and a pharmaceutical composition comprising the one or more cell composition, a method for identifying a compound useful in treating cell composition, a method for identifying a compound useful in treating pain (e.g. spinal segmental nerve injury (Chung), chronic constriction injury (CCI) and spared nerve injury (SNI) in an animal (e.g. gene cellication) which is differentially expressed during pain. Note: The sequence data for this patent did not form part of the printed cellication, but was obtained in electronic form directly from WIPO at the composition and animal of or the composition of the printed cellication and part of the printed cellication and control of the printed cellication and control of the printed cellication and cellication of the cellication at the cellication of the cellication at the cellication of the cellication at the cellication of the cellication at the cellication of the cellication at the cellication of the cellication at the cellication of the cellication at the cellication ftp.wipo.int/pub/published\_pct\_sequences

                                                 This invention describes a novel ovarian tumour protein which can be uto detecting the presence of an ovarian cancer in a patient by stimulating and/or expanding T cells specific for the tumour protein. products of the invention can also be used in a method to inhibit the development of a cancer in a patient comprising (a) incubating CP4+ and/or CD8+ T cells isolated from a patient with at least one ovarian tumour protein, such that T cell proliferate and (b) administering to patient the proliferated T cells. The cytostatic polynucleotides or polypeptides described in the invention are useful for treating or inhibiting the development of cancer, particularly ovarian cancer and stimulating and/or expanding T cells specific for a tumour protein or
                                                                                                                                                                                                        New polynucleotides encoding tumor proteins, treating or inhibiting the development of cancer, particularly ovarian cancer, and for stimulating and/or expanding T cells specific for a tumor protein.

The cytostatic polynucleotides or polypeptides described in the invention are useful for treating or inhibiting the development of cancer, particularly ovarian cancer and stimulating and/or expanding T cells specific for a tumour protein or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              14-NOV-2000; 2000US-00713550.

                                                                                                                                                                                to detecting the presence of an ovarian cancer in a patient by stimulating and/or expanding T cells specific for the tumour protein. products of the invention can also be used in a method to inhibit the development of a cancer in a patient comprising (a) incubating CD4+ and/or CD8+ T cells isolated from a patient with at least one ovarian tumour protein, such that T cell proliferate and (b) administering to patient the proliferated T cells. The cytostatic polynucleotides or polypeptides described in the invention are useful for treating or inhibiting the development of cancer, particularly ovarian cancer and stimulating and/or expanding T cells specific for a tumour protein or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            New polynucleotides encoding tumor proteins, treating or development of cancer, particularly ovarian cancer, and f and/or expanding T cells specific for a tumor protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ovarian; tumour protein; cancer; T ccytostatic; gene therapy; human; ds.
                                                                                                                                                                                                                                                                                                                                                                                                                                                            This invention

This invention describes a novel ovarian tumour protein which can be u to detecting the presence of an ovarian cancer in a patient by stimulating and/or expanding T cells specific for the tumour protein. products of the invention can also be used in a method to inhibit the development of a cancer in a patient comprising (a) incubating CD4+ and/or CD8+ T cells isolated from a patient with at least one ovarian tumour protein, such that T cell proliferate and (b) administering to patient the proliferated T cells. The cytostatic polynucleotides or polypeptides described in the invention are useful for treating or inhibiting the development of cancer, particularly ovarian cancer and stimulating and/or expanding T cells specific for a tumour protein or gene therapy.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     New polynucleotides encoding tumor proteins, treating or inhibiting the development of cancer, particularly ovarian cancer, and for stimulating and/or expanding T cells specific for a tumor protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Example 12; SEQ ID

                                                                                                                                                                                                                                                                                                                                          This invention relates to novel isolated polynucleotides and methods for the therapy and diagnosis of cancer, particularly ovarian cancer. Specifically, it refers to these polynucleotides and the encoded polypeptides thereof, as well as immunogenic peptides, antibodies, antigen presenting cells (APCs) and immune system cells (e.g. T cells) that are targeted to those cells expressing the proteins of interest. The present invention describes methods that are useful for stimulating and/ or expanding T cells specific for a tumourigenic protein (i.e. T cell therapy). Furthermore, compositions can be used for the diagnosis, treatment and/ or prevention of ovarian cancer by stimulating an immune response in a patient. Accordingly, these compositions exhibit cytostatic activity. This polypeptide is a human ovarian tumour antigen protein sequence given in an exemplification of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Novel isolated ovarian tumor polynucleotide encoding ovarian tumor polypeptide, useful as probes of primers for detecting presence of cancer in a patient.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      human; ovarian cancer; immunogenic; antibody; antigen presenting cell; APC; immune system cell; T cell; tumourigenic; cytostatic.

Sequence 6828, Application US/09949016;
Patent No. 6812339;
GENERAL INFORMATION:
APPLICANT: VENTER, J. Craig et al.
TITLE OF INVENTION: POLYMORPHISMS IN KNOWN GENES ASS;
TITLE OF INVENTION: WITH HUMAN DISEASE, METHODS OF FILE REFERENCE: CL001307;
CURRENT APPLICATION NUMBER: US/09/949,016;
CURRENT FILING DATE: 2000-04-14;
PRIOR APPLICATION NUMBER: 60/241,755;
PRIOR APPLICATION NUMBER: 60/237,768;
PRIOR APPLICATION NUMBER: 60/237,768;
PRIOR FILING DATE: 2000-10-03;
PRIOR APPLICATION NUMBER: 60/231,498;
PRIOR APPLICATION NUMBER: 60/231,498;
PRIOR FILING DATE: 2000-09-08;
NUMBER OF SEQ ID NOS: 207012;
SOFTWARE: FASTSEQ for Windows Version 4.0;
SEQ ID NO 6828;
LENGTH: 630
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 5 B 5

Sequence 8327, Application US/09949016

Patent No. 6812339

GENERAL INFORMATION:
APPLICANT: VENTER, J. Craig et al.
TITLE OF INVENTION: POLYMORPHISMS IN KNOWN GENES ASS
TITLE OF INVENTION: WITH HUMAN DISEASE, METHODS OF
FILE REFERENCE: CL001307

CURRENT APPLICATION NUMBER: US/09/949,016

CURRENT FILING DATE: 2000-04-14

PRIOR APPLICATION NUMBER: 60/241,755

PRIOR APPLICATION NUMBER: 60/237,768

PRIOR FILING DATE: 2000-10-20

PRIOR APPLICATION NUMBER: 60/237,768

PRIOR APPLICATION NUMBER: 60/237,768

PRIOR FILING DATE: 2000-09-08

NUMBER OF SEQ ID NOS: 207012

SOFTWARE: FastSEQ for Windows Version 4.0

SEQ ID NO 8327

LENGTH: 260

TYPE: PRT
ORGANISM: Human

Sequence 8164, Application US/09949016

Patent NO. 6812339

GENERAL INFORMATION:

APPLICANT: VENTER, J. Craig et al.

TITLE OF INVENTION: POLYMORPHISMS IN KNOWN GENES ASSOCIATED

TITLE OF INVENTION: WITH HUMAN DISEASE, METHODS OF DETECTION AND USES THEREOF

CURRENT APPLICATION NUMBER: US/09/949,016

CURRENT APPLICATION NUMBER: 00/241,755

PRIOR APPLICATION NUMBER: 60/237,768

PRIOR FILING DATE: 2000-10-20

PRIOR FILING DATE: 2000-10-20

PRIOR FILING DATE: 2000-10-20
